Murano Glass Chandelier, 1960s  
28" high, 21" wide

Murano was a commercial port as far back as the 7th Century, and by the 10th Century it had grown into a prosperous trading center with its own coins, police force, and commercial aristocracy. Then, in 1291, the Venetian Republic ordered glassmakers to move their foundries to Murano because the glassworks represented a fire danger in Venice, whose buildings were mostly wooden at the time. What made Murano's glassmakers so special? For one thing, they were the only people in Europe who knew how to make a mirror. They also developed or refined technologies such as crystalline glass, enameled glass (smalto), glass with threads of gold (aventurine), multicolored glass (millefiori), milk glass (lattimo), and imitation gemstones made of glass.
